

IPL Performance & Revenue Intelligence

Data Quality Report

1. Report Overview

This report documents the data-quality validation performed on the cleaned IPL match-level and ball-by-ball datasets. The validation covers record counts, duplicate records, winner and toss-winner consistency, referential integrity between deliveries and matches, and missing dates and cities.

2. Dataset Summary

Dataset	Records
Matches	1,095
Deliveries	260,920

3. Validation Results

Validation Check	Result	Status
Total Matches	1,095	PASS
Total Deliveries	260,920	PASS
Duplicate Match IDs	0	PASS
Duplicate Match Rows	0	PASS
Duplicate Delivery Rows	0	PASS
Invalid Winners	0	PASS
Invalid Toss Winners	0	PASS
Invalid Delivery Match IDs	0	PASS
Missing Dates	0	PASS
Missing Cities	0	PASS

4. Data Cleaning & Standardization

- Team names were standardized to provide consistent analytical team identities across historical records.
- Venue names were standardized to reduce duplicate venue representations caused by city or location suffixes.
- Missing city values were resolved using venue-based city mapping where the venue supplied a reliable location.
- The original method field was retained; a derived method status can be used for analysis where required.
- Legitimate missing values such as player-of-match or result-related fields were not arbitrarily replaced.

5. Integrity Checks

- Match IDs are unique.
- No duplicate match rows were detected.
- No duplicate delivery rows were detected.
- Every non-null winner corresponds to one of the two participating teams.
- Every non-null toss winner corresponds to one of the two participating teams.

- Every delivery record references a valid match ID.
- No missing match dates remain.
- No missing city values remain.

6. Data Quality Conclusion

Based on the supplied final validation results, all listed integrity checks returned zero exceptions, while the dataset contains 1,095 matches and 260,920 delivery records. The cleaned data therefore passes the validation checks defined for this stage of the IPL analytics project.

7. Recommended Data Governance Rules

- Enforce unique match IDs at the match-table level.
- Require delivery match IDs to exist in the match master table.
- Validate winner and toss-winner values against team1 and team2.
- Maintain standardized reference values for teams and venues.
- Validate date fields before loading analytical datasets.
- Keep raw data unchanged and maintain documented cleaning transformations.
